

POWERPOD

Scott Wilson & Minimal, USA

coalesse®

Inventive.

PowerPod is an artful solution to the mundane task of plugging in. It provides two functions in one beautiful package: convenient tabletop access to four power outlets, disguised when not in use by an useful accessory tray.

PowerPod's energy-saving on/off switch with and indicator light reduces "vampire" power consumption. Surge-suppression is built in. The milk and silver finishes blend with almost any décor.

The contour of PowerPod bottom cradle is designed to work in conjunction with the grommet of SW_1 and Sebastopol tables, or can be used independently without grommet on any table.

"I have such a hunger to learn, to try new things, and to connect the dots."
 — Scott Wilson
